

## **Inspection Points for Motor Home DJs Motorized Inspection**

We at **DJ's RV Services** appreciate your business and look forward to providing you with the most advanced RV inspection available in today's RV market. So that we may provide you with a thorough inspection, your RV will need to be hooked up to all the utilities...fresh water, electricity and sewer( if possible) during the inspection.

Due to the nature of RV absorption refrigerators and the time it takes for these refrigerators to cool the refrigerator must have been in operation for at least 12 hours before an accurate temperature reading can be taken in the freezer and the refrigerator compartments.

This report will consist of photos, videos, and 360-degree images describing the items that have been identified during the detailed **DJs Motorized Inspection**.

\*\*\*\*\* The appointment is not considered final until payment is made, and contract signed.

Ro	of
	Inspect and rate the overall roof condition
	Identify the roof material type and the sealants that have been applied to the roof
	Evaluate the condition of the various sealant and joints around the roofing components
	Rate the condition of the roof vents, air conditioners, antenna and other components that are
	mounted on the roof
	Identify areas of concern and potential water intrusion points
Sic	dewall and End Caps
	Inspect and identify the material type of the front and rear caps
	Evaluate the aging and general overall condition of the front and rear caps
	Inspect and evaluate the appearance and functional condition of the end caps, sidewalls, entrance
	doors, windows and cargo access doors
	Inspect and evaluate any damage, discoloration and delamination of the side wall and end cap
	components
Sli	deout Rooms
	Identify the types of slideout room drive systems
	Identify the type of roof material for the slideout room
	Inspect and rate the roof condition
	Inspect and evaluate the condition of the seals, sweeps and gaskets for possible damage
	Evaluate the attached wiring and utility harness that feed underneath the slideout room

Aw	nings and Slideout Toppers	
	Inspect and identify the operational type (manual vs. electric) of the awnings, slideout toppers and window awnings	
	Operate and rate condition of the awning frames and latching mechanisms	
	Evaluate and rate the condition of fabric material of the awnings	
	Measure and document the fabric size of the awnings	
Cha	assis Turn Signal and Running Lights (12-volt DC)	
	Inspect the condition of the 7-pin connector receptacle	
	Activate and evaluate the operation of the DOT lights Visually inspect the chassis battery compartment, the electrical connections and batteries	
120	O Volt AC Electrical System (house type power)	
	Inspect and rate the condition of the power cord and its connection ends	
	Identify any damage or repair of the power cord	
	Remove cover panel of the 120-volt circuit breaker box to visually inspect the condition of thewiring, circuit breakers and grounding connections	
	List any heat discoloration to the wiring and connections	
	Verify the separation of all the wiring types  Test and verify the output operation of the 120 VAC to 12 VDC converter for charging of the deep	
	cycle batteries	
<b>Generator- Engine</b> – if installed *strongly recommend performing oil analysis to determine combustion engine component condition.		
	Identify and note the model, serial number and run hours of the generator Check oil level	
	Start and operate the onboard generator	
	Test the voltage output and frequency (60 cycles)	
	Put generator under a load to verify operation (typically operating 1 air conditioner will create the correct amount of load)	
<b>Generator - Radiator</b> - <i>if installed on this model of Generator *strongly recommend performing cooler analysis to determine the condition of the coolant fluid and the internal cooling system.</i>		
	Location of the radiator and cooling fans Visually inspect the coolant reservoir, radiator and hoses	
Inv	erter – if installed	
	Identify and note the model and serial number of the inverter	
	Visually inspect the wiring and electrical connections and fuses/circuit breakers	
Coach Battery System – (12-volt DC deep cycle Battery Electrical System)		
	Locate and note the location of the battery stack	
	Evaluate the condition, age and matched sizing of the battery stack	
	Evaluate and determine if positive and negative cables are correctly matched for balanced load	
	Access and visually inspect the wiring, fuse panel and fuses of the 12-volt DC electrical system Evaluate the operation of the fresh water /wastewater monitor panel for incorrect tank readings	

_	sh Water System
	Verify the freshwater connections for the city water hookup are operational Test and verify proper filling of the freshwater tank Verify the onboard freshwater tank and pressure pump system will operate and maintain pressure Operationally test all freshwater fixtures inside and outside of the RV
	Visually inspect the water filtration system (if installed) for leaks and filter placement
	Operationally test and inspect both waste (gray and black) plumbing systems for leaks under the sinks, shower, around the toilet and discharge lines Identify the type of drain valve controls  Verify the drain valves for both systems will maintain water in their tanks  Operate both drain valves and test for ease of operation  Verify the drain cap is in place and will hold wastewater
Life	e Safety Items
	Perform and document LP gas timed leak test at cooktop burner spud for 5 minutes at 8 inches of water column gas pressure (if propane stub or quick connect is available)  Test the Ground Fault Circuit Interrupter (GFCI) circuits in the 6-foot range of the water areas of thebathroom, kitchen and exterior receptacles  Test all wall receptacles for correct polarity and ground fault  Test the exterior skin for hot skin that would cause electrical shock  Emergency Exit Windows – Verify all safety windows are operational  Fire Extinguisher – Verify unit is secure in bracket and dial indicates extinguisher is fully charged  Smoke/Fire Detector –Test and verify operation of unit and document expiration date of detector  Carbon Monoxide Detector (if applicable) – Test and verify operation of unit and document  expiration date of detector  LP Gas Detector – Verify gas detection and audio alarm and document expiration date of detector  Verify the rubber grommet is properly sealed around LP gas line of water heater  Gas System  Visually inspect all hoses and pressure regulators for damage and age deterioration
	Verify the plastic cover has been installed over the regulator
	ME tank - if equipped  Conduct a visual inspection of tank for rust or physical damage if tank is accessible  List the location of the tank  Document the manufacture date of the ASME tank if accessible  List the gallon capacity of the tank
	frigerator Identify the brand, and type of refrigerator Note the location of the vent panels used by refrigerator Operate on all heat sources - 120-volt AC, LP gas and for 3-way refrigerators, 12-volt DC Collect serial and model number and verify with manufacturer if recall notice has been issued and completed for this unit.

	<ul> <li>✓ Visually verify if baffle system on back of refrigerator area is correct and directing heat away gas coils</li> <li>✓ Test for interior temperature of upper and lower refrigerator compartments and ice maker (i installed) *if refrigerator has been operating for minimum of 12 hours</li> </ul>
	Check condition of door frame, shelving, crisper drawers, door shelves and interior light Evaluate and rate the door gasket seals of freezer and refrigerator box areas
	Identify the brand, model and type of water heater Visually inspect burner assembly and gas exhaust system for blockages and insect infestation Fill tank with water (if necessary) and verify operation on all heat sources.  Determine if proper drain plug has been installed in water heater tank If installed, inspect and evaluate if the correct type of dauber screen is being used
	If accessible, identify the brand, model and type of furnace(s) that have been installed Identify the type of thermostat controls being used to operate furnace(s)  Visually inspect air intake and exhaust assemblies for blockages and insect infestation  Operate and verify warm air discharge out of vents and proper return air flow to unit  Monitor for unusual noise or vibration of blower motor  If installed, inspect and evaluate if the correct type of dauber screen is being used
	Evaluate and rate the condition of the cooktop or stove List presence and condition of stove top covers Verify the ignition and operation of all top burners and the oven flame (if equipped) Inspect and rate the condition of the metal grill top and rubber grommets of top burner area Evaluate the presence of the control knobs, door handles and oven racks of the unit
	Conditioner(s)  Identify and list the type of cooling unit/heat pump Perform cooling efficiency test (Delta T) on each unit Inspect the air filter, cooling and the heat exhaust coils for debris and cleanliness
	Visually inspect and verify a wash and rinse cycle of the washer and dryer Visually inspect for leaks or damaged hoses Evaluate and rate the exterior condition of the dryer exhaust vent
Mic	crowave/Convection Oven Identify and list the brand, model, type and output wattage of the unit Verify the rack and turn tables are installed Operate unit for 60 seconds utilizing cup of water and then list water temperature

shwasher - if installed Identify and list the brand of unit Verify operation of unit and inspect for leaks and non- functioning rotating racks and wash bars
House Vacuum System – if installed Identify and list the brand of unit Verify the operation and visually inspect the various components of the hose assembly, access doors and dirt bag
ctric Fireplace – if installed Identify and list the brand of unit Operate and verify the various heat settings, fan speed levels and the back lighting
oktop Exhaust Fan Operate and verify condition of the exhaust function and fan speeds Visually inspect the filter and lighting Evaluate and rate the exterior condition of the exhaust vent
iling Mounted Fans and Ceiling Exhaust Vents Visually inspect the condition of the blades and motor Operate and verify condition of the blade direction and fan speeds Verify lighting if equipped
erior Conditions and Appearance  Visually inspect all ceilings, walls, interior doors and flooring for signs of water intrusion, surface damage and/or staining  Operate all windows and doors noting any deficiencies or missing components  Evaluate the window coverings  Operate all interior, exterior and décor lighting - 12 volt and 120 volt
Inspect and evaluate all cabinet doors, drawers and pull out operation Visually inspect all counter tops and flat surface areas of the kitchen, living room, bathroom, bedroom and storage areas for scratches and damage Identify and list all broken and loose cabinet and closet hardware Note if appearance of previous damage repairs has been performed
Visually inspect the condition of the dinette table/booth, chairs, recliners and sofa Inspect and note furniture fabric tears, discoloration and signs of excessive wear Visually inspect and note signs of mattress damage or staining
tertainment System  Visually inspect and operate all TV and stereo equipment  Verify local channels antenna and 12-volt DC power signal booster is operational  Raise and lower roof mounted antenna if equipped  Verify remotes are operational

□ Vis	er/Tub Enclosure sually inspect the glass panels, curtains and soap dish areas aluate and rate the seals around the framework and doors for water leaks
□ Ор	perate the door and latch system to verify its operation spect and evaluate the stains and chemical/mineral build up
be driv	<b>Home -</b> Please note the following items: Due to insurance restrictions the Motor Home can NOT ren by the Inspector. Also, the lack of clearance under the motor home and safety issues the tor will conduct the following visual inspections from the outer perimeter of the motor home.
	s and Undercarriage sually inspect for rust, damage and excessive oil on the underside of the motor home
<b>Steerir</b> □ Vis	ng sually inspect for bent or damaged components and hydraulic leaks
	ng System
	entify and note the brand and type of system rify the system operates properly by extending and retracting leveling system
	te visual indications of hydraulic leaks or mechanic issues
_	*strongly recommend performing oil analysis to determine internal combustion engine
	nent condition. ake and model of the engine
	rify oil level on the dipstick
☐ Ind	dications of engine issues or any noises while running
	e there noticeable oil or exhaust leaks
⊔ No	te the oil pressure reading on the dash gauges
fluid ar	<b>or</b> *strongly recommend performing coolant analysis to determine the condition of the coolant and the internal cooling system.
	cation of the radiator and cooling fans
⊔ VIS	sually inspect the coolant reservoir, radiator and hoses
	nission *strongly recommend performing transmission fluid analysis to determine the condition of
-	id and the internal components of the transmission.
	pe of transmission uid level on dipstick
	dications of contaminated transmission fluid
Runnin	ng Gear (Motor Home)
□ Тур	pe and number of axles
	eight ratings for each axle set
	spect the frame, axles, springs, rims and other components for rust, oil stains and visible damage
	cument the information on the tires as to their age and weight capacities eck tire pressure
	spect and rate tire tread condition

	Note any valve extensions and pressure monitors		
Hitch System/Hook Up			
	Inspect and identify the type of system used to tow vehicles		
	Evaluate and list modifications to hitch system		
Weight Labels and Data Plates			
	Identify and document the Vehicle Identification Number (VIN)		
	Locate and document Vehicle Frame Number		
	List the RVIA inspection seal number		
	List the Gross Vehicle Weight Rating		
	List date of manufacture
